## THE THERMOSTAT CONTROLS

Your fridge has one control for regulating the temperature. The temperature control is located on the front of the freezer above the cavity, visible only when the door is open. Depending on your room's ambient temperature, you may need to adjust the temperature setting to achieve your desired temperature.

The dial positions and related temperatures are as follows;

- Dial position "Min" provides a cool temperature.
- Dial position "Med" is suitable for normal operation, suitable for most situations.
- Dial position "Max" provides the coolest temperature.

## INSTALLATION TIPS

- When starting up for the first time, keep the refrigerator upright for 1 hour before connecting it to a power supply.
- When you install your appliance, set the thermostat knob to position "Med" for the first 24 hours, after which you can set it to the level that best suits your needs. It is the best to wait 24 hours before adding food.

Please refer to your user manual pages 8–12 for detailed instructions.
